

MULTIHEAD WEIGHER SOLUTIONS FT-MHW-TF

Product number **1203001010**

A multihead weigher is an ideal solution for weighing accurate portions at high speed and high throughput per hour. Even 200 portions per minute or 3000 kgs per hour capacities can be achieved with various products.

In the food industry multihead weighers are used in wet and dry environments for a variety of packing tasks from potato chips to chicken fillets.

Kometos is offering multihead weigher solutions in the role of a system integrator combining weighers with Kometos' own products and equipment from other suppliers like traysealers, metal detectors, labelling machines etc. to be able to offer the customer a complete line from one supplier who is responsible for the entire delivery.

Kometos' own products for multihead projects are: weigher feed systems, distribution units, traylines with tray dispensers, sauce depositors, platforms etc. components, that can be produced in Kauhajoki.

Technical information

Products: meatballs, nuggets, small sausages, meat cubes (chilled), other free flowing and slightly sticky products
